1.1.1 | Assignment # 1

Lab Activity-05: Understanding version control – Git

1. Task: Provide the screenshots for the following items (10 pts):

2. What file(s) and folders are inside the cloned repository? What do you observe in the index.html file? (5 pts)

There are no folders inside the cloned repository, and there is only 1 file inside which is the [readme.md](#) (a markdown to summarize what the rep is all about).

Things that I observe inside the index.html is it uses a script using jquery library, a js library. It also uses ajax for some awesomefont. Overall it contains a basic setup for html with the use of javascript and some basic css.

3. What is the importance of executing “Git Pull” command? (5 pts)

It is very important as this command will let us update to the latest version of the repository.

4. What do you observe in the commit history? How does Git track changes? (5 pts)

It has a unique identifier to identify the history of the commits and who made a commit or changes to the repository. Git track changes based on pushing or committing a change using the git commit and git push command.

5. What happened after pushing the changes? (5 pts)

It will basically just change the remote repository based on your local machine. In my end, it changes the remote repository of my created branch based on the local machine that I have.

6. Is there any drastic changes in the logs after the “git push” command? (5 pts)

No, there is no drastic changes in the logs after the git push command. Git logs basically shows if there are commits.

Reflection Section (20 pts)

Write your insights based on the following questions:

1. What did you learn about Git’s version control capabilities?

I learned a lot of the git's version control capabilities. You can easily upload and download files on the remote repository to your local machine and vice versa. Just a simple command, it can drastically make it easier to share and collaborate with others.

2. How does Git handle file changes when switching between branches?

It handles the file changes swiftly and smoothly. It only changes the branch and not the main.

3. How does git pull ensure synchronization with the remote repository?

It ensures synchronization by getting the latest commits or version of the remote repository to your machine.

4. What challenges did you face during the exercise, and how did you overcome them?

I faced quite a challenge on my end facing the exercise. There is a specific structure that I had to visualize which my professor helped me. I overcame this by understanding how the structure actually looks like when committing a change to a branch.

Basically, what you have in your local machine is a representation of the main branch or main origin. Using that knowledge, when creating a commit on your branch, it copies the files that you added on your cloned rep to the branch.

SCREENSHOTS

```
Command Prompt - git log X + -
C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1>git config --global user.name
orphiano-0

C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1>git config --global user.name koo_student

C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1>git config --global user.email mkbarias@tip.edu.ph

C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1>git config --global user.email
mkbarias@tip.edu.ph

C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1>git switch ARIASKB
Already on 'ARIASKB'
Your branch is ahead of 'origin/ARIASKB' by 1 commit.
(use "git push" to publish your local commits)

C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1>git status
On branch ARIASKB
Your branch is ahead of 'origin/ARIASKB' by 1 commit.
(use "git push" to publish your local commits)

nothing to commit, working tree clean

C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1>dir
Volume in drive C has no label.
Volume Serial Number is CE26-7A77

Directory of C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1

09/08/2025  09:46 am  <DIR>          .
09/08/2025  09:43 am  <DIR>          ..
09/08/2025  09:46 am  <DIR>          ARIASKB
09/08/2025  09:45 am             3,569 README.md
               1 File(s)             3,569 bytes
               3 Dir(s)  97,647,210,496 bytes free

C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1>git add.
git: 'add.' is not a git command. See 'git --help'.

The most similar command is
    add

C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1>git add .

C:\Users\A205\Desktop\temp_fd\arias\bda_cs41s1>git commit -m "Creating a new folder to store all my laboratory
[ARIASKB 630d501] Creating a new folder to store all my laboratory
```

```
Command Prompt X + -
commit 630d50150cc877f5c8f7e9efcce6cac22d85d35a (HEAD -> ARIASKB, origin/ARIASKB)
Author: koo_student <mkbarias@tip.edu.ph>
Date: Sat Aug 9 10:13:45 2025 +0800

    Creating a new folder to store all my laboratory

commit 5d3fb47f922b798b14c05625fc7f7bc720d598ff
Author: orphiano-0 <gab.orphiano@gmail.com>
Date: Sat Aug 9 09:48:48 2025 +0800

    Creating a new folder to store all my laboratory exercise submissions.

commit 2d2f5802e26b3786b40125ef41786d42b1b5fbb4 (origin/ZARAPESJA, origin/TESOREROLAC, origin/TABIQUEROKRV, origin/SUAV
